

This form must be completed and uploaded to the “My Team” area on the FSG website **no later than the date specified** in the Action Deadlines. **A printed copy of this form must be presented together with the vehicle at Technical Inspection.**

The Impact Attenuator Data (IAD) and supporting calculations must be submitted electronically in Adobe Acrobat format (*.pdf).

Contact Details

Car number(s) (eg. 42 (FSG))

Team name

University name

Team Contact Person

Last name, first name

Telephone number

E-mail address

Please NOTE: FS Germany accepts only dynamic test as mentioned in T3.19.1!

The Impact Attenuator Data (IAD) must include the following points:

If the IA (Impact Attenuator) is a **“Standard IA Design”**, the following points must be included:

1. The first **two pages** must always be this FSG Impact Attenuator Data Form, including the completed general and (if applicable) testing summary
2. The report must be written in English and in „engineering style“ (e.g. contents, captions, symbols, page numbers)
3. Images and description of the design of the Impact Attenuator (IA), positioning on the Anti-Intrusion Plate (AIP) and IA volume (T3.17.2) above the ground (dimensions in mm)
4. Method for attachment of the IA to the AIP (including data sheets, with referenced strength values highlighted), e.g. if they are bonded together). Note: for mounting the Standard IA to the AIP the adhesive shear strength must be at least 24 MPa (T3.17.7).
5. Dimensions of the front bulkhead (FBH) (dimensions in mm)
6. Proof of additional diagonal or X-bracing in the FBH or equivalent per T3.17.7 if the FBH width is larger than 400 mm and/or height is larger than 350 mm
7. Design of the AIP (material, thickness and dimension in mm)
8. Method for attachment of the IA assembly to the FBH
9. Current receipt of the material, a packing slip or letter of donation of the IA. Note: these must be actual receipts, no (open) offer or request forms.
10. Pictures (or sketches) and description of the attachment on the car, including front wing attachments and non-crushable object(s) such as sensors, if applicable.

If the IA (Impact Attenuator) is a **“Team’s Own IA Design”**, the following additional points must be included:

1. FS Germany accepts only dynamic impact attenuator tests (e.g. sledge test or drop down) with real test data (see T3.19.1), including impact attenuator, anti intrusion plate (AIP), (representative) front bulkhead and, if applicable (per T3.19.4) the front wing, other non-crushable object(s) and/or structurally representative dummies thereof in front of the AIP.
2. Description of the test set up (including sensor, data acquisition system, test fixture)

3. If alternative materials are used for the AIP, equivalency to T3.17.3 must be proven by physical testing as in T3.19.2. Test fixture must be made from the same materials as the intended chassis (consistent with SES).
4. If the test is accomplished at a company or research center, a letter of conformity must be attached.
5. If the test is accomplished at the university, an official of the university (with contact details) must sign a letter of conformity (must be attached to the report).
6. Graphs of average deceleration and peak deceleration over an interval of time, absorbed energy over an interval of time and force over displacement and/or interval of time.
7. Pictures before and after the dynamic impact attenuator test, including proof of measurement of permanent deflection of the AIP (proof, T3.19.2). Note: the FBH cannot be structurally compromised after the test.

General Summary

IA type

IA description (e.g. form/shape/lay-up)

IA to AIP attachment

IA to AIP attachment description (e.g. adhesive type/name, method & shear strength)

AIP thickness & material

AIP description

AIP to FBH attachment

AIP to FBH attachment description

FBH type

FBH description (e.g. dimensions tubes/material/lay-up)

FBH dimensions (width & height, mm)

FBH with diagonal or X-brace (T3.17.7)?

Dynamic testing (T3.19)

Dynamic Testing Summary

Test type (e.g. barrier/drop test), date & site

Test speed (> 7 m/s)Test weight (≤ 300 kg)Energy absorbed (≥ 7350 J)Peak deceleration (≤ 40 g)Avg. deceleration (≤ 20 g)

Peak force (kN)

Aerodynamic devices and/or sensors in front of FBH (add description)?

Aerodynamic devices, sensors and/or dummies thereof included in test (add description)?

Combined peak force (≤ 120 kN)

1 Design of IA, positionning on the AIP

FIGURE 1 – Impact Attenuator

The IA is the Standard honeycomb IA (pre-crushed) one and has a volume of $100 \times 200 \times 200 \text{ mm}^3$

2 Method for attachment of the IA to the AIP

The Crashbox is glued to the Anti Intrusion Plate on its pre-crushed face. Here follows the technical sheet of the glue used.

The system has not been fabricated yet, so we can not provide any photography.

3M
Scotch-Weld™
EPX™ Adhesive DP490

Product Data Sheet

Updated : March 1996
Supersedes : November 1993

Date : March 1996
EPX Adhesive DP490

Product Description	DP490 is a black, thixotropic, gap filling two component epoxy adhesive with particularly good application characteristics.	It is designed for use where toughness and high strength are required and shows special benefits in the construction of composite assemblies.	The product has excellent heat and environmental resistance.
----------------------------	---	---	--

Physical Properties <small>Not for specification purposes</small>		BASE	ACCELERATOR
Specific Gravity		1.00	1.00
Consistency		Non-sag paste	Non-sag paste
Mix Ratio By Weight		100	50
		100	50
Colour		Black	Off-White
Work Life		1.5 hours minimum at 23°C	
Time to Handling Strength		4 to 6 hours at 23°C	
Time to Full Strength		7 days (test to full performance at one week)	
Shelf Life		15 months from date of despatch by 3M when stored in the original carton at 21°C (70°F) & 50 % Relative Humidity	

Performance Characteristics <small>Not for specification purposes</small>	Performance Characteristics of the Cured Adhesive.	Two cure cycles were evaluated as follows:
	Cure Cycle 1	7 days at 23°C
	Cure Cycle 2	24 hours at 23°C, 1 hour at 80°C

Temperature Performance in Shear and Peel.	(Etched Aluminium) Shear Strength to BS 5350 C5. Peel Strength was floating roller peel to BS5350 C9.		Tests were performed at 23°C unless otherwise stated.
Temperature (°C)	Shear Strength (1) (N/mm²)	Shear Strength (2) (N/mm²)	Peel Strength DaN/cm
-55	23.7	31.6	N/A
23	30.2	28.7	9.24
80	11.9	12.7	7.32
120	2.8	3.2	N/A
150	1.9	1.7	N/A

Adhesion to Etched Aluminium after Environmental Ageing

Ageing Condition	Shear Strength (N/mm²)
RT Control	26.2
Water at 23°C, 750 hours	25.6
50°C, 90% RH, 750 hours	22.0
120°C, 750 hours	25.3
175°C, dry heat, 120 hours	29.6
Skydrol 500B at 23°C, 750 hours	27.6
JP4 at 23°C, 750 hours	28.7
Hydraulic Oil at 23°C, 750 hours	29.5

DP490 shows good adhesion to many plastic surfaces even by simply solvent wiping.

This can be improved still further by the use of 3M Scotchbrite abrasion and/or use of the primer Scotch-Weld 3901.

Plastics	Shear Strength (N/mm²)
Carbon Fibre Reinforced Epoxy	36.1 (cohesive)
Polyester Sheet Moulding Compound	4.3 (substrate)
Glass Fibre Reinforced Phenolic	30.3 (cohesive)
ABS (filled)	3.2 (substrate)
PVC (filled)	2.9 (substrate)
Astoy (glass filled polycarbonate)	3.0 (adhesion)
Valox (glass filled PET)	1.4 (substrate)
PMMA	3.7 (adhesion)
Noryl (m XTRA) (glass filled PPO)	4.9 (adhesion)

Date : March 1996
EPX Adhesive DP490

Storage Conditions	Store product at 15°C to 25°C for maximum storage life.
---------------------------	---

Directions for Use /Clean Up	Place the cartridge into the 3M EPX Applicator and clip into position. Remove the resealable cap. Expel a small quantity of adhesive and ensure both components flow freely. Attach correct mixer nozzle (this should have 20 or more elements). Dispense the adhesive as required. When finished either leave the nozzle in place and store, or remove the nozzle, wipe clean the tip, and replace cap. To re-start after storage remove the old nozzle with cured adhesive and re-fit a new nozzle, or remove the cap and fit a new nozzle.	Surface Preparation: The degree of surface preparation depends on the bond strength required and the environment likely to be encountered by the bonded structure. For most plastics solvent wiping with 3M VHB surface cleaner, followed by abrasion with 3M Scotchbrite 7447, followed by a further solvent wipe until clean, will give good performance (except for acetal, polyethylene and polypropylene and some other low surface energy materials). This also applies to powder coat paints and other stoved paint systems. The same surface preparation will also give good adhesion to metal surfaces. The objective is to remove loosely attached surface films such as oils, waxes, dusts, mill-scale, loose paints and all other surface contaminants in addition to enhancing mechanical adhesion. Grit-blasting using a clean, fine grit also offers excellent adhesion on many metallic substrates. Where humid environments are likely to be encountered by metallic substrates we recommend additional priming with 3M Scotch-Weld 3901. Alternatively, chemical conversion coating techniques combined with priming can offer the best durability. Clean-Up: Excess uncured adhesive can be removed with the following solvents: 3M VHB Surface Cleaner (mild alcohol based cleaner) 3M Scotch-Grip Solvent No.2 (Ketone blend) 3M Industrial Cleaner (Aerosol).
-------------------------------------	---	--

Additional Product Information	Please contact your 3M Salesperson for additional information on the preparation of difficult surfaces, or likely exposure to aggressive environments.
---------------------------------------	--

Date : March 1996
EPX Adhesive DP490

Health & Safety Information	Precautions: Causes severe eye irritation, may cause permanent eye damage. Irritating to skin. May cause sensitisation by skin contact. Avoid contact with the skin and eyes. Wear suitable gloves and eyeface protection. Laundry contaminated clothing before re-use. Avoid prolonged breathing of vapours. Avoid inhalation of dust when grinding or cutting cured material.	First Aid: Eye Contact: Immediately flush eyes with copious amounts of water for at least 15 minutes, holding eyes open. Call a physician. Skin Contact: Wash immediately with plenty of soap and water.	For further information please contact the Toxicology Department at the Bracknell Head Office on (0344) 658000.

FIGURE 2 – Glue datasheet

3 Dimensions of the front bulkhead and proof of an additional diagonal

FIGURE 3 – Dimensions of the front bulkhead

FIGURE 4 – Proof of the presence of an additional diagonal member

The front bulkhead measures $388\text{mm} \times 388\text{mm}$. The tubes have an external radius of 14mm . You can also see on a previous image the effective diagonal tube.

4 Design of the AIP

FIGURE 5 – Development plan of the AIP

The AIP is made out of S235 steel and 1.5mm thick, to show compliance with rule T 3.17.3

5 Method for attachment of the AIP to the front bulkhead

The AIP is welded along its entire perimeter to the FBH. The AIP has not been welded yet, but it will be in a few weeks. We cannot provide any photographs yet.

Here is the invoice of the IA.

7 Annexe : IA datasheet

The values of our IA are highlighted on Figure 8.

PAMG-XR1 5052 Aluminum Honeycomb

Description:

PAMG-XR1 5052 aerospace grade aluminum honeycomb is a lightweight core material which offers superior strength and corrosion resistance over commercial grade aluminum honeycomb. PAMG-XR1 5052 honeycomb is made from 5052 aluminum alloy foil and meets all the requirements of AMS C7438.

Applications:

PAMG-XR1 5052 honeycomb uses include aircraft floors, aircraft leading and trailing edges, missile wings, fan casings, fuel cells, fuselage components, helicopter rotor blades and navy bulkhead joiner panels, energy absorption, air/light directionalization and EMI/RFI shielding. PAMG-XR1 5052 honeycomb is suitable for applications where materials conforming to AMS C7438 are required.

Features:

- Elevated use temperatures
- High thermal conductivity
- Flame resistant
- Excellent moisture and corrosion resistance
- Fungi resistant
- Low weight / High strength
- Long shelf life. The mechanical properties referenced are maintained for 15 years minimum if not exposed to moisture, weather or any normal hazard.

Availability:

PAMG-XR1 5052 honeycomb is available in four forms: unexpanded blocks, unexpanded slices, untrimmed expanded sheets and cut to size expanded sheets. It is also available with or without cell perforations to facilitate cell venting for certain applications.

Cell Sizes:	1/8" - 3/8"
Densities:	1.0 pcf - 12.0 pcf
Sheet "Ribbon" (L):	48" typical - 72" max
Sheet "Transverse" (W):	96" typical - 200" max
Sheet Thickness (T):	20/34" max
Tolerances:	Length: + 6", - 0" Width: + 6", - 0" Thickness: ± .005" (under 4" thick) ± .062" (over 4" thick) Density: ± 10% Cell Size: ± 10%

NOTE: Special dimensions, sizes, tolerances, CNC machining and die cut to size can be provided upon request.

Corrosion Resistance:

The chromated XR1 coating offers excellent protection for honeycomb cores exposed to corrosive environments, meeting the requirements of AMS C7438, CL2.

FIGURE 7 – Impact Attenuator Datasheet Page 1
